Assignment 0205 Feedback

Allyson Pascua

(updated proficiencies, except for *4f*, based on commits up to April 24)

1a — By and large, you show good command line mastery, specifying precise commands, staying strictly with the command line, and minimizing manual eyeballing by you to get to the desired information. (+)

1b — You worked with processes and memory usage well, choosing precise commands to get just the information you need. (+)

1c — Your file activities look good, and you successfully made the command line work harder for you. (+)

1d — You showed good proficiency with managing I/O across the board. One gap is in your *ssh* tunneling evidence—you have a screenshot showing the tunnel's creation, but none showing successful use of it. This is an important second half of this activity. (/)

1e — You have shown that you have no problems interacting with computers across a network. (+)

4d — You generally did a good job with looking up necessary information, particularly in seeking opportunities to fully make the command line work for you. (+)

4e — You phased your work appropriately for the given scope, with good commit messages. (+)

4f — Not submitted on time. (−)
