Assignment 0502 Feedback

Allyson Pascua

1c — You have successfully performed a number of command-line activities pertaining to file systems. (**+**)

1d — You worked with `dumpe2fs` and `hexdump`, captured their output, and captured your shell activities without any problems. (**+**)

2e — You successfully navigated a virtual disk at the byte level. Although you did use `dumpe2fs` to pull out values that were available directly in the superblock bytes anyway, I will give you the benefit of the doubt and presume that you only did this for convenience, and if push came to shove, you would be able to derive the block and inode sizes directly from the hex dump. (**+**)

4d — Your work shows excellent resource and documentation use in accomplishing this task. (**+**)

4e — Your version control activity in this assignment is appropriate for its scope. (**+**)

4f — Submitted a few days late, but work is complete and correct. (**|**)
